

Overview

Links Article Match Retrieval Service (Links AMR) is an API service that supplies:

- article data from Web of Science™ Core Collection
- article data from Data Citation Index
- Journal Profile page from InCites™ Journal Citation Reports® or Journal Impact Factor five-year trend graph from Journal Citation Reports®

Your service agreement specifies the data elements you may obtain.

In order to ensure consistent and reliable performance, Links AMR employs throttling to limit the number of citations processed per period.

Subscription Information

If you would like to subscribe to Links Article Match Retrieval Service, or if you would like more information about the service, contact your Thomson Reuters account manager or visit the support page.

Support

If you have questions about using our products or about your access to them, please visit the Global Customer Support Center at <http://ip-science.thomsonreuters.com/support>. This page has links to our support knowledgebase, the local telephone numbers, and hours of operation. When you click on the **Open eTicket** tab, your issue will be immediately routed to your local support team.

Questions about network connections and/or the use of your web browser should be directed to your network administrator.
