## Expanded Metrics and New Features

---

- **Normalized Eigenfactor**<sup>®</sup> is the Eigenfactor Score normalized, by rescaling the total number of journals in the JCR each year, so that the average journal has a score of 1. Journals can then be compared and influence measured by their score relative to 1. Available in both the Journal Rankings grid and on Journal Profile Pages.
- **Percentage of Articles in Citable Items** gives information on what proportion of a journal's citable items are Articles vs. Reviews. Available in both the Journal Rankings grid and on Journal Profile Pages.
- **Journal Impact Factor Percentile** transforms the rank in category by Journal Impact Factor into a percentile, allowing more meaningful cross-category comparison.
