Expanded Metrics and New Features

- **Normalized Eigenfactor**[®] is the Eigenfactor Score normalized, by rescaling the total number of journals in the JCR each year, so that the average journal has a score of 1. Journals can then be compared and influence measured by their score relative to 1. Available in both the Journal Rankings grid and on Journal Profile Pages.
- **Percentage of Articles in Citable Items** gives information on what proportion of a journal's citable items are Articles vs. Reviews. Available in both the Journal Rankings grid and on Journal Profile Pages.
- **Journal Impact Factor Percentile** transforms the rank in category by Journal Impact Factor into a percentile, allowing more meaningful cross-category comparison.

New Features:

- **Open Access Filter and Badge** - sort results by Open Access status and immediately identify Open Access journals by the badge on the Journal Profile page.
